

EB TARGET VOLATILITY 4

This internal branch 23 investment fund is marketed by Allianz Benelux SA/NV in the group insurances. Your payments are converted into units of the fund and are assigned to the contract.

INVESTMENT POLICY

The assets of the internal investment fund are 100% invested in the sub-fund **Allianz Strategy 15** of the open-ended investment company with variable share capital (SICAV) **Allianz European Pension Investments**, organised under the laws of Luxembourg.

The sub-fund invests to a variable extent in international equity markets and in the market for euro bonds. Applying a quantitative approach, management lowers the investment in stocks in phases of high market volatility and raises it in phases of low volatility. Overall, it strives to achieve a return that is comparable to the return of a mixed portfolio investing 15% in international stocks and 85% in medium-term euro bonds.

SUMMARY RISK INDICATOR (SRI)

The summary risk indicator is a guide to the level of risk of this Fund compared to other products. It shows how likely it is that the Fund will lose money because of movements in the markets or because we are not able to pay you. The sub-fund invests in financial markets and uses techniques and instruments which are subject to fluctuations, which can result in gains or losses.

Due to the stock portion in the sub-fund, depreciations are possible. In periods of rising interest rates, interest fluctuations can also cause depreciations of the bonds.

MANAGER COMMENTS

Global equities closed February modestly higher as the ongoing rollout of COVID-19 vaccines and the prospect of massive US fiscal stimulus lifted hopes of economic recovery. However, global stocks subsequently came off the best as sentiment, particularly towards highly valued growth stocks, was negatively affected by the ongoing rise in inflation expectations. The sell-off in global bonds continued, with yields moving sharply higher. Taken with their weak performance in January, bonds have now suffered the worst start to a year since 2015 amid fears that the rollout of COVID-19 vaccines may spur economic growth and fan inflation.

In this market environment, the fund posted a negative performance. This was primarily due to the bond part of the portfolio which detracted from performance in an environment of rising yields. The equity sleeve of the portfolio gained in value but could not compensate for this. Over the course of the month, the investment degree of the fund rose to about 111%. Equities accounted for round 28% of the portfolio, while exposure to bonds was at ca. 83%.
